

JCB Factory, Uttoxeter

Project Particulars

Value: £250,000

Duration: 5 weeks

Client: JCB Limited

Engineer: Bowmer & Kirkland

The new facility for JCB at Uttoxeter is part of their continued expansion as a leading manufacturer of civil engineering plant.

Greyhound Plant Services were subcontracted by Bowmer & Kirkland to carry out works to the new entrance for the factory development, in order to improve traffic safety for heavy goods entering and leaving the facility.

The works consisted of excavation, site clearance, new drainage and placing of sub-bases and bases to the new road alignments, together with kerbs and beanie blocks, new fencing and landscaping.

The project was carried out during March and April 2000 to local adopting authority standards.

The client on this project was highly delighted with a job well done, on time and within budget, with minimum disruption to public traffic, JCB staff and materials/completed plant deliveries.
